

marking that is scaled down to 25, and the student needs to satisfy two criteria for the sum-total of $25(L) + 15(P) = 40$ –

1. s/he needs to clear the cut-off of 40% for summative i.e. 16, and
2. s/he needs to get relative grade point of at-least 5.0.

Instructions for assessment

1. Submit both record and manual with signatures of both the internal examiner and HOD, physics on first page of record.
2. Practice is allotted on a random basis.
3. **Pre-experiment report:** Before start of experiment, student needs to write the following segments.
 - Aim
 - Apparatus
 - Working formula
 - Circuit/Ray diagram
 - Model graph
 - Table for data collection
 - Procedure
 - Precautions
 - Applications
 - Calculations (post-experiment)
 - **Result** (post-experiment)
4. **Experiment:** The internal examiner will evaluate the pre-experiment report and accordingly approve for experiment.
5. **Post-experiment report:** The students needs to record the data, do the calculations and report the result. Result segment is the most **important** of all and carries high weightage
6. **Viva-voce:** External examiner will conduct the viva-voce.
